PROJECT MANAGER

BILL VERVAEKE

Bill is the Building Service Manager for Walton & Company. He has over 35 years of HVAC and Service experience. Bill's HVAC licenses are in the state of Pennsylvania and Maryland.

FOGGING

Everyone is looking for some type of HVAC process or method to use upon the return of "normal" from the stay-at-home order for COVID-19. Millions of people are affected by this pandemic and are eager to get back to the swing of things when it's safe to do so. In helping the efforts of a Baltimore Community, we were able to safely go into their educational buildings and campus and use a method called Fogging to disinfect their interior buildings.

ADVANTAGES TO FOGGING

Our product we use is PureGreen24, it's on the list of disinfectants that meets the Center for Disease Control's (CDC) and EPA criteria for use against these pathogens.

PureGreen24 is a proven natural antimicrobial disinfectant and deodorizer that offers rapid efficacy. PureGreen24 kills the deadliest of super bugs, yet also kills everyday household germs.

TESTIMONY

The driving mission in my role at Beth Tfiloh is the safety of our community members and that they have an environment that supports their educational and spiritual needs. We rely upon Bill Vervaeke and Walton & Company's Building Services to provide us with their professional maintenance of our HVAC systems, and expert advice and service. Since the outbreak of the Corona Virus and the lock-down of our campus, Walton & Company is fogging our facility with a product that helps kill airborne contaminants. This process gives us the confidence that our building will be properly sterilized for the safe return of our faculty, congregants, students, and community when this crisis has passed. We appreciate their continued support and timely response when any need arises. *
